Guide

PRODUCT OVERVIEW

Armada™ fungicide provides exceptional contact and systemic turf protection against 14 of the toughest turf diseases. Developed specifically for use by lawn care professionals, Armada prevents most major turf diseases, including brown patch, dollar spot and more, with extended residual control for up to 28 days or longer, depending on local conditions.

Armada contains the same active ingredients as Compass™ and Bayleton® for highly effective dual activity against disease. Recommended as a preventative treatment, Armada also offers curative treatment for most diseases.

MODE OF ACTION/HOW PRODUCT WORKS

The active ingredients in Armada come from the strobilurin and sterol inhibitor chemistry classes. This dual activity provides both contact and systemic turf protection. Armada bonds to the tissue surface to prevent disease infection from the outside, plus is taken up by the root system to provide protection from inside the plant. The result is long-lasting, comprehensive disease protection against most major turf diseases.

EFFECTIVE TANK-MIX OPTIONS

Armada is compatible with most insecticides, fungicides and foliar nutrient products. When conditions favor *Pythium* blight development, a pythium-control product such as Banol® fungicide should be mixed with Armada.

Key Diseases Controlled

- Brown patch
- Dollar Spot
- Leaf spot

Benefits

- Contact and systemic protection
- Prevents most major turf diseases
- Curative treatment options for most diseases
- Developed specifically for lawn care professionals

FREQUENTLY ASKED QUESTIONS

Q: How will using Armada benefit my lawn care business?

A: Armada provides key benefits expressly for lawn care operators. First, it delivers long residual control, which fits well within customers' monthly maintenance schedules. Second, Armada is economically priced when compared to competitive products, increasing your margins and profits.

Q: How can I help my customers understand the value of preventative fungicide treatments to protect their turf against disease?

A: Customers need to recognize how fast turf disease can strike and kill unprotected turf. To help educate your customers about the importance of a professional disease management program, Bayer Environmental Science offers you access to free online marketing tools at BayerMarketingTools.com. There you'll find a variety of materials you can customize for your clients and prospective clients.
