

“After using Revolver, we have more days of actively growing bermudagrass, and that means stronger and healthier turf. Revolver has enabled us to more faithfully clean up areas that are not overseeded, getting the *Poa annua* out without a problem. I feel like we are more in control over the turf.”

Wayne English, Berkeley Hall, Blufton, SC

Weeds Controlled	Ryegrass (transition)	Clumpy ryegrass, tall fescue, other cool-season grasses	Annual blue grass (<i>Poa annua</i>)	Goosegrass	<i>Poa trivialis</i> ; <i>Poa annua</i> ; ryegrass and bentgrass in overseeded bermudagrass greens, tees, collars, approaches	Centipedegrass (suppression)	Dallisgrass (suppression)
Application Time	Apply during spring transition when bermudagrass has resumed growth. Higher temperatures will speed transition.	Apply any time target weeds are present. Weed control is faster at higher temperatures.	<ul style="list-style-type: none"> Non-overseeded warm season turf: apply anytime annual bluegrass is present Overseeded warm season turf: apply up to 1 week prior to overseeding 	Make 2 or more applications 6-8 days apart.	Apply during the spring transition period.	Apply when weeds are present.	Spot treatment Mid-August to Mid-September.
Application Rate Oz./1000 ft ²	0.2 to 0.4	0.2 to 0.6	0.2 to 0.4	0.4 to 0.6	0.1 to 0.4	0.6	0.2 to 2 oz per gallon of water
Application Rate Oz./Acre	8.8 to 17.4	8.8 to 26.2	8.8 to 17.4	17.4 to 26.2	4.4 to 17.4	26.2	MSMA at 0.9 lbs/Acre followed by Revolver at 0.09 lb ai/Acre (7-14 days after MSMA application)

WHAT IT IS.

A sulfonylurea herbicide. Controls weeds resistant to other products.

WHAT IT GIVES YOU.

- Provides economical postemergent control of many cool-season grasses (clumpy ryegrass, *Poa annua* and other weeds) in bermudagrass and zoysia-grass, as well as control of goosegrass and suppression of dallisgrass
- Transitions ryegrass effectively and quickly

WHY IT BEATS THE COMPETITION.

- Economical—effective at low use rates
- More effective control of goosegrass
- Significant suppression of dallisgrass
- Attacks weeds resistant to other herbicides

HOW IT MAKES YOUR JOB EASIER.

- Revolver works quickly—usually within a week or two, even faster in warm weather temperatures
- You control the speed of transition

REVOLVER®

RELAX. YOU'RE BACKED BY BAYER.

Training. Troubleshooting. Innovating. Count on us to stand behind you now and for years to come. Get science and support at BackedByBayer.com or 1-800-331-2867.

REVOLVER®

THE SCIENCE OF REVOLVER® HERBICIDE.

Revolver® herbicide is based on a sulfonylurea chemistry. It controls weeds resistant to other herbicides. Revolver also fights weeds at their most vulnerable times (regrowth, season change, rebounding back from injury).

Revolver is readily absorbed by foliage, where it stops the plant's production of three key amino acids. Cell division and growth stop within hours. Weeds die even faster in warmer temperatures.

Easy to tank mix with many products

- Atrazine
- Image®*
- MSMA*
- Ronstar® herbicide
- Manage®
- Sencor® herbicide*

*Note that Revolver tank mixes with Image, MSMA or Sencor may increase temporary yellowing of bermudagrass.

Effective control

- Ryegrass
- Goosegrass
- Bentgrass
- Kentucky bluegrass
- *Poa annua*
- *Poa trivialis*
- Tall fescue
- Centipedegrass (suppression)
- Dallisgrass (suppression)

Perfect for many applications

- Golf courses
- Sports fields, parks
- Commercial lawns
- Campsites, recreational areas
- Home lawns
- School grounds
- Sodfarms

Revolver herbicide key benefits

- Postemergent control of cool season grasses in warm-season turf
- Goosegrass control and dallisgrass suppression
- Different mode of action for resistance management
- Labeled for use on listed bermudagrass greens
- Easy mixing and application
- Low rates, cost effective
- SC formulation, packaged in a 4 x 1 quart case
- Apply as early as 7 days prior to overseeding

Frequently asked questions

- >Q Why use a chemical transition aid when all I have to do is wait for hot weather?
- >A Initial research has demonstrated that new perennial ryegrass cultivars being used for overseeding persist, even in hot, dry weather. Revolver herbicide will stop ryegrass from competing with bermudagrass and allow turf to fill in more completely. This establishes a strong bermudagrass base for the rest of the season and in preparation for the next year's overseeding.

THE SCIENCE OF YOUR PROFESSION.

Every quart of Revolver is Backed by Bayer, and all the science and support you need to get the job done right. That's what you should expect from an industry leader.

Our staff is your staff.

No one invests as much in product development as Bayer. Our scientists' expertise in chemistry and formulation technology is unrivalled around the world. Our field sales and technical representatives are always ready to help you. You'll find them and additional information 24 hours a day, 7 days a week at BackedByBayer.com.

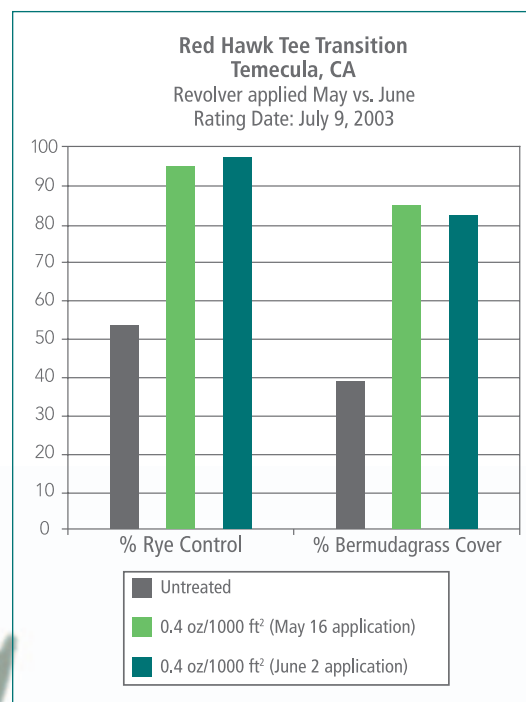

Product support year round.

We'll help you diagnose problems, troubleshoot issues, and get every product benefit you expect—and even some you don't. We also offer interactive training throughout the year.

Complete satisfaction guarantee.

Bayer guarantees your satisfaction, after all, your success is our success.
