

Maxforce® Fly Spot
Bait is here. Literally.

MAXFORCE
FLY SPOT BAIT
Bayer Environmental Science

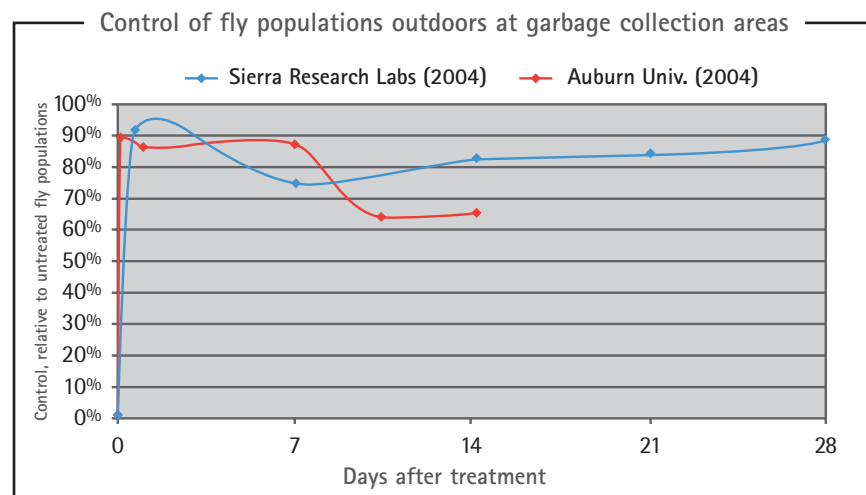

Maxforce goes where no other fly bait has gone before.

Treat the following areas

- Inside commercial establishments
- Around the outside of residences and commercial buildings
- In partly enclosed or protected areas
- In and around agricultural livestock production facilities

Long-lasting control

- Immediate results
Flies start to die in 60 seconds or less
- Long residual
Up to 6-weeks indoors
Up to 30-days outdoors

This chart shows reductions in fly populations around dumpsters located behind commercial food handling establishments. Surfaces of the dumpster, as well as surrounding surfaces, received spot treatments with Maxforce Fly Spot Bait. Control can be maintained, even outdoors, for up to one month with a single application.

Easy application

- Treat less surface area compared to contact killing sprays
- Water soluble granule, just dilute in water and spray
- Treating small spots is effective and saves time
- Can be used as a paint-on application

The unique power of Maxforce Fly Spot Bait

- 3 powerful attractants: irresistible aroma, seductive pheromone and sugar base
- Active ingredient, imidacloprid, works quickly, even against flies resistant to other insecticides
- Sprayable formulation
- Low odor

Responsible fly control

- Formula contains Bitrex™ bittering agent to minimize ingestion by non-target animals.

Maxforce is Backed by Bayer™ and all the science and technical support that comes with it.
